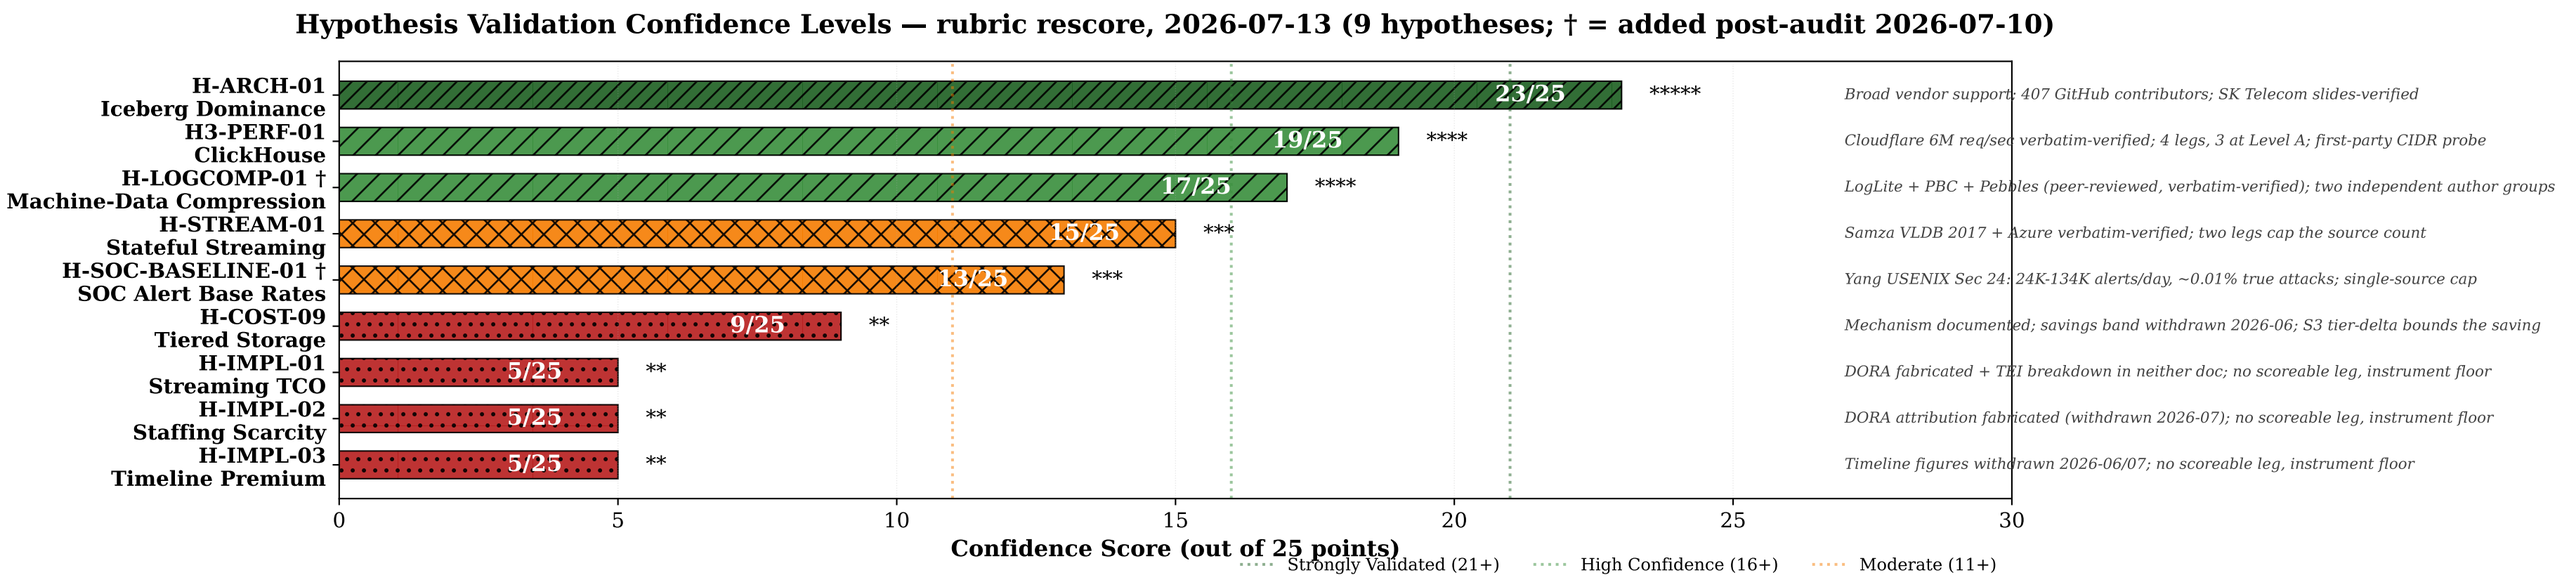

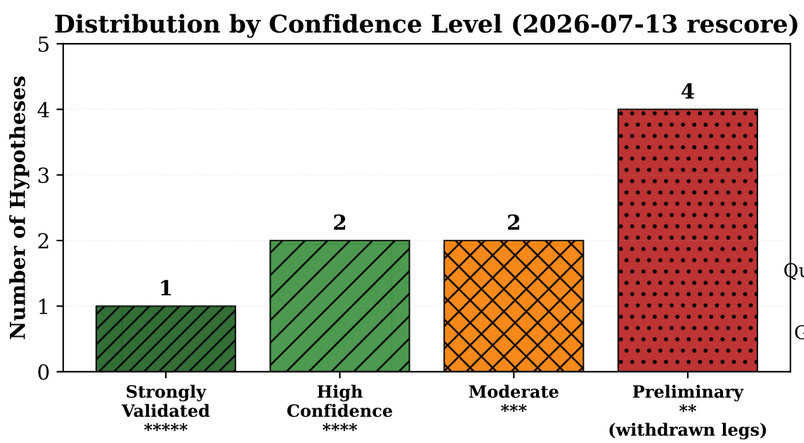

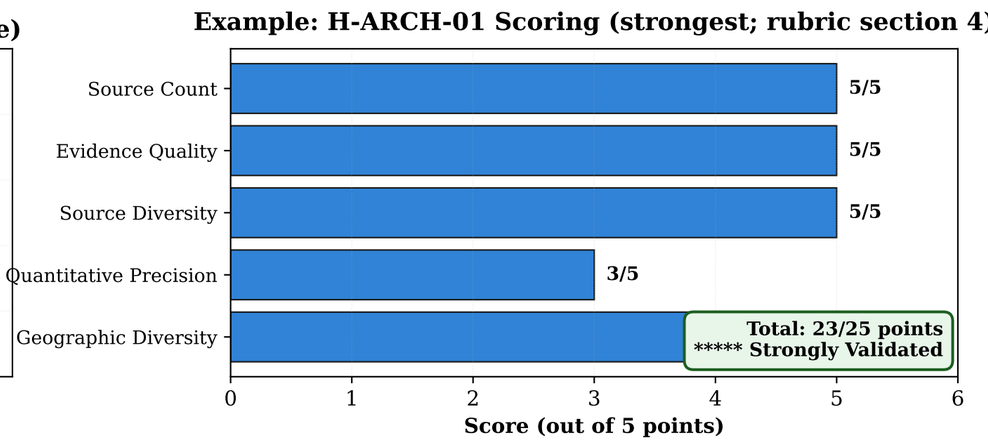

Figure 4: Hypothesis Validation Confidence Levels — rubric rescore (2026-07-13)

```
Confidence rescore, 2026-07-13 (methods/scoring-rubric.md; applied in methods/RESCORE-2026-07-13.md):
   - Every score is the sum of five anchor-valued dimensions, so a reviewer holding the rubric and the
 bibliography re-derives it. Bands: 21-25 Strongly Validated, 16-20 High, 11-15 Moderate, 5-10 Preliminary.
        - 1 strongly validated (H-ARCH-01), 2 high confidence (H3-PERFORMANCE-01, H-LOGCOMP-01),
          2 moderate (H-STREAM-01, H-SOC-BASELINE-01), 4 preliminary (H-COST-09, H-IMPL-01/02/03).
   - H-STREAM-01 moves High -> Moderate: after the Uber withdrawal the section cites two legs, and the
     source-count anchor prices 1-2 sources at 1 point. One further verified leg restores it to 17/25.
  - H-IMPL-01/02/03 sit at the instrument's 5/25 floor: no scoreable leg survives the audits, and their
                  former 6/7/7 gradation was judgment the rubric cannot express.
            - Every score reflects only evidence that survived primary-source verification.
